

Why should you take part in our Erasmus MOOS-Online course?

- Practicing English
- Meeting new people
- Knowing more about other cultures and countries
- Travelling
- Getting new experience
- Learning online
- Following the courses anywhere at anytime
- Choosing the courses that you like best

The MOOS project is about the planning, implementation and experimentation of a transnational, digital, educational platform and related principles of “Open Education” applied to High School level (ages 14 to 18).

What is MOOS-Online?

Explained by students for you

- Pescara, Italy • Södertälje, Sweden
- Burgos, Spain • Busko – Zdrój, Poland
- Wuppertal, Germany • Hyvinkää, Finland
- Ely, United Kingdom

What do you think are we doing in our Erasmus project?

When you sign in to the Erasmus MOOS platform you will be able to find courses and lessons based on different subjects and do them without any pressure. We've created a platform open to students as well as adults all around Europe. We create and test different courses so people can learn by themselves through a simple e-learning platform. Some cannot leave their homes to study and some want to expand their learning. Our aim is to create a better social environment between all European countries participating in the project.

Why are there so many cultures and countries involved in the Erasmus PLUS project?

Schools from seven different European countries are supported by the European Union to produce courses for the MOOS-Online Platform in cooperation with each other.

How much does it cost?

In whichever country you belong to, education can be expensive, but now you have the possibility to learn without any costs. The only thing you need is access to the internet.

If you have ever felt school to be difficult or if you have not understood your teachers' lessons then you can log in to Erasmus PLUS!

On this website (lms.moos-online.eu) you could find courses that help you in high school subjects, for example there is a course on how to write an argumentative essay.

This course could help you write your assignment in a better way, you could even get a higher grade.

You could also learn how to develop your knowledge and skills in writing essays, in chemistry, maths, physics and other subjects.

A New European Common Curriculum .

Our MOOS project is based on a European Common Curriculum . It will help you improve your learning skills and meet new friends from all over Europe. (European Staff picture below)
